## New JDN General Catalogue

In the new 44 page General Catalogue, we present the current JDN Production Programme.

New in the catalogue: The JDN Energy Feeding Systems as well as comprehensive information around the JDN Service.

The new catalogue is initially available in German and English. Further languages will follow.

## JDN Energy Feedings

In this issue: The JDN Energy Chain.

The energy supply for trolley drive in overhead travelling cranes is realised by a horizontal version of the energy chain. A guide channel is mounted on the girder with the chain gliding inside. The energy chain carries air hoses inside, which supply the hoisting motor, driving motors as well as the control hoses of the crane.

The energy supply for crane drive in overhead travelling cranes is realised by a vertical installation.

On underslung cranes, the energy supply for hoisting and driving motors is realised by a vertical installation of the energy chain.

Further information about this topic is included in the new general catalogue.
